Experience

Frontend Developer Intern

BTec Software Company (Remote)

March 2025 - May 2025

- Assisting in building a job portal application where companies post jobs and students apply, track applications, and view responses through interactive dashboards.
- Working in a fast-growing startup, contributing clean, scalable frontend code using modern development practices.
- Enhancing skills by exploring full-stack concepts and real-time UI updates to support future backend integration.

Projects

Multivendor e-shop

Full Stack Web Application

- Built a full-stack multivendor e-commerce platform enabling customers, sellers, and admins to manage products, orders, and workflows (React, Redux, Node.js, Express, MongoDB).
- Added real-time buyer-seller chat and order updates using Socket.IO, with secure JWT-based authentication and Cloudinary media uploads.
- Designed a modular, deployment-ready architecture with environment configuration, centralized error handling, and scalable data storage.

Real Estate

Full Stack Web Application

- Built a full-stack real estate platform with user authentication (email + Google OAuth), profile image uploads via Cloudinary, and full CRUD for property listings (React, Redux, Node.js, Express, MongoDB).
- Improved UX with a Swiper-based image slider and persisted client state using Redux-Persist for a seamless experience across page reloads.
- Hardened and deployed the app with CORS-restricted API and production hosting (backend on Railway, frontend on Vercel), delivering a secure, deployment-ready solution.

Rescue Link

Full stack Web Application

- Built full-stack platform enabling quick photo and location reporting of injured animals.
- Implemented image uploads, geolocation support, and paginated MongoDB storage for reports.
- Designed responsive React/Tailwind UI with accessible forms, listing cards, and contact workflows.

Skills

React.js Node.js Bootstrap Git
Github Clerk State Management
HTML5 & CSS3 Next.js Tailwind CSS
Express.js RESTful APIs TypeScript
Web Socket PostgreSQL Supabase
Mongo DB JWT Cloudinary.js JS

Summary

I am a full-stack MERN developer with strong experience building user-friendly, responsive web apps using React, Tailwind CSS, and Redux. I design and implement backend services with Node.js, Express, TypeScript, PostgreSQL, Supabase, and MongoDB, enabling robust, scalable APIs and secure JWT authentication. I focus on clean, efficient, and visually appealing interfaces while continuously improving my skills to build and maintain complete end-to-end web applications.

Education

Bachelor's in Computer Science (BSCS)

Oct 2024 - Oct 2028

- NCBA&E University, Lahore
- Currently Enrolled
